

## How do I install a kitchen faucet?

---

All of Price Pfister faucets are easy to install with a minimum amount of tools.

The following installation steps will help you install your new faucet:

1. Shut off water supply valves and remove old faucet.
2. Install deckplate through 1 1/4" hole and tighten with wing nuts.
3. Drop faucet into plate with handle and spout facing forward.
4. Flush Supply Lines. This should be done prior to installation, by running water through your house supply lines into a contained source. This will clean out any resident debris.
5. Secure to sink using mounting hardware provided.
6. Connect supply lines. Flexible supply lines are recommended. (Price Pfister connectors are 1/2").
7. Attach spray hose if available.
8. Remove aerator and run water for a minute to flush debris.

Step by step, easy to use installation diagrams are included with all Price Pfister faucets.
